

# **IMPORTANT INFORMATION ABOUT YOUR DRINKING WATER**

## **Deferral Issued for 1,4-Dioxane in the Jericho Water District**

### **Why are you receiving this notice/information?**

You are receiving this notice because testing of our public water system found the chemical 1,4-Dioxane in your drinking water above New York State's maximum contaminant level (MCL) of 1 ppb for 1,4-dioxane. The MCLs are set well below levels known to cause health effects in animal studies. Therefore, consuming water with 1,4-dioxane at the level detected does not pose a significant health risk. Your water continues to be acceptable for all uses.

The Jericho Water District has submitted, and the New York State Department of Health (Department) has issued, a deferral to the Jericho Water District. When a public water system is issued a deferral, the water system agrees to a schedule for corrective action and compliance with the new MCLs. In exchange, the Department agrees to defer enforcement actions, such as assessing fines, if the water district is meeting the established deadlines. We are required to update the Department and the Nassau County Department of Health each calendar quarter on the status of our projects. If we do not meet the agreed upon deadlines, the Department can resume enforcement.

### **What are the health effects of 1,4-dioxane?**

Laboratory studies show that 1,4-dioxane caused liver cancer in animals exposed at high levels throughout their lifetime. Other types of cancer have also been reported, although less consistently than liver cancer. There is no evidence of 1,4-dioxane cancer effects in humans. The United States Environmental Protection Agency considers 1,4-dioxane a likely human carcinogen based upon studies of animals exposed to high levels of this chemical over their entire lifetimes.

At the level of 1,4-dioxane detected in your water, exposure from drinking water and food preparation is well below 1,4-dioxane exposures associated with health effects

### **What is New York State doing about 1,4-Dioxane in public drinking water?**

The New York State Department of Health (NYS DOH) has adopted a drinking water regulation that requires all public water systems to test for 1,4-dioxane. If found above the MCLs, the water supplier must take steps to lower the level to meet the standard. Exceedances of the MCL signal that steps should be taken by the water system to reduce contaminant levels.

### **What is being done to remove these contaminants?**

The Jericho Water District has prepared an aggressive action plan and is in the process of designing and constructing Advanced Oxidation Process (AOP) facilities for the removal of 1,4-dioxane in seven (7) different wells. As noted in the District's quarterly reports, two (2) of these facilities are currently under construction with the rest being ready to bid by late 2022. These AOP systems also include Granular Activated Carbon which remove PFOA and PFOS. In addition, the District has developed plans for the installation of a new well and associated treatment to further expand its clean water supply. Additional information will be shared as further testing and progress occurs. This process is similar for any chemical detected in public drinking water that requires mitigation. The

Deferral Issued for 1,4-Dioxane in the Jericho Water District

compliance timetable will ensure that your drinking water will meet the MCL as rapidly as possible. The deferral is effective until August 25, 2023

**Where can I get more information?**

For more information, please contact Peter F. Logan, Superintendent, at (516) 921-8280 or at 125 Convent Road in Syosset, NY. You can also contact the Nassau County Department of Health at (516) 227-9692.

If you have additional questions about these contaminants and your health, talk to your health care provider who is most familiar with your health history and can provide advice and assistance about understanding how drinking water may affect your personal health.

Public Water System ID# NY2902831  
Date September 7, 2022
